

New Film: Green Dragon

Insights into Chinese sustainable construction

CHINA: A Dragon Turning Green

A New Documentary and Multimedia Project Sheds Light on Green Construction in China, One of the Biggest Untold Stories of China's Environmental Challenge.

Through a revealing new documentary and multimedia report found at www.greendragonfilm.com, Chinese government officials and industry professionals share the extraordinary pace of change within China's green building industry. "China has done something that took 30 years to achieve in the US – from having virtually no green building eight years ago, they now have national codes in place, they're developing a national certification system and they have over 4 million square meters of internationally-certified building space already built," says Rob Watson, co-founder of the LEED green building rating system.

This film provides a rare window into the story of the biggest building boom in human history. It has been an unforgettable experience and an honor to have had the opportunity to make this film."

- CAROLINE HARRISON, CREATIVE DIRECTOR/CO-PRODUCER/EDITOR

"Before making this film I had no idea of what an amazing journey I was embarking on. I had been told that over half the world's construction takes place in this one country, but only when you see it do you believe it."

- MAX PERELMAN, RESEARCH DIRECTOR/CO-PRODUCER

"I am Chinese. I know China intimately. Yet only through making this film did my eyes open to the need for sustainable construction. As a result of making this film, my life has changed."

- RIVER YUN LU, LOCALIZATION DIRECTOR
